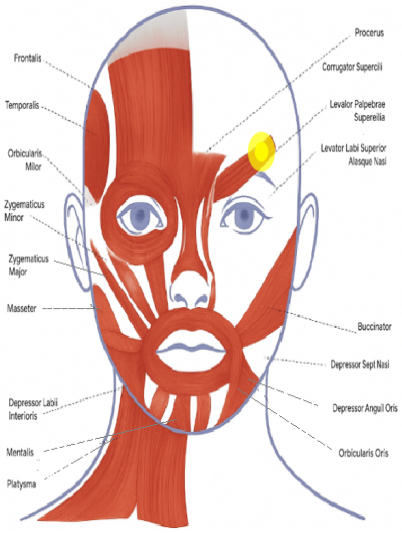
Analysis Type: hyperactivity
Primary Treatment: Massage Therapy
Treatment Intensity: high
Session Frequency: weekly
Primary symptoms: headaches
Severity Scale: 3
Follow-up Plan: 3_months



Generated Treatment Plan:

PROFESSIONAL ANATOMICAL TREATMENT PLAN
Target Area: CORRUGATOR SUPERCILII
Analysis Type: hyperactivity
Primary Treatment: massage therapy

CLINICAL ASSESSMENT:
The patient presents with symptoms affecting the corrugator supercilii region. Based on the hyperactivity analysis, the following treatment protocol is recommended.
Primary Symptoms: headaches
Severity Rating: 3

TREATMENT PROTOCOL:
1. Initial Assessment
- Comprehensive evaluation of corrugator supercilii function and condition
- Baseline documentation with clinical photography
- Patient history and contraindication screening
2. Primary Treatment: massage therapy
- Treatment Intensity: high
- Session Frequency: weekly
- Progressive monitoring of muscle response and patient tolerance
- Adjustment of treatment parameters based on individual response
3. Monitoring and Follow-up
- Regular assessment of treatment efficacy
- Documentation of progressive improvements
- 3_months

PATIENT EDUCATION:
- Expected timeline for visible results: 7-14 days
- Potential side effects and their management
- Post-treatment care instructions
- Activity restrictions and recommendations

SAFETY CONSIDERATIONS:
- Patient should be advised of all potential risks and contraindications
- Informed consent must be obtained prior to treatment
- Emergency protocols should be reviewed with patient
